

Equine Health Status Declaration for Competition V1

I confirm the health status of each equine I have entered for the event, and each equine I will bring to the event as below.

I undertake to check again just before travel and NOT to bring any equine to the event unless it satisfies the health points:

Member body/discipline:	ICD UK, affiliated to British Carriagedriving
Please confirm your horse(s) currently show none of the clinical signs listed:	<ul style="list-style-type: none"> ● recent cough of unknown cause ● recent nasal discharge of unknown cause ● enlarged lymph nodes ● fever (>38.5°C) ● recent onset of neurological signs of unknown cause ● diarrhoea
Please confirm the following statements:	<p>The horse(s):</p> <ul style="list-style-type: none"> ● is not under current investigation for infectious diseases including, for example, Equine Herpes Virus (EHV), Equine Influenza, Strangles. ● has not been in contact with and is not kept on the same premises as a horse known to have or be under investigation for the neurological form of EHV, Equine Influenza, Strangles or Equine Viral Arteritis.
Please agree to the following statement:	The horse(s) will not travel to an event should their temperature readings be above 38.5°C.

In addition, your horses must have up to date equine flu vaccinations – boosted yearly. It is recommended, but not compulsory for ICD, to have a flu vaccination within the 6 months and 21 days before an event, but not within 7 days of the event.

If unsure about your horse’s health for competition, please seek veterinary advice rather than risk them and others.
